TAKANORI MAEHARA

PERSONAL DETAIL

Name:	Takanori MAEHARA
Position:	Senior Software Engineer
Affiliation:	Roku, Inc.
Address:	123 Main Street, London, CB4 0GZ, United Kingdom
EMail:	tmaehara@roku.com (work), tmaehara@acm.org (private)
Web:	http://tmaehara.gitlab.io
Google Scholar:	https://scholar.google.com/citations?user=3ei4ZqoAAAAJ
Orcid-id	https://orcid.org/0000-0002-2101-1484

SUMMARY

A Machine Learning Engineer specialised in Search and Recommendation Systems and a Researcher in Theoretical Computer Science focusing on Discrete Mathematics and Theoretical Machine Learning.

EDUCATION

Doctor of Information Science and Technology *March 2009 – September 2012*
The University of Tokyo, Japan
Graduate School of Information Science and Technology
Supervisor: Professor Kazuo MUROTA

Master of Information Science and Technology *March 2007 – March 2009*
Graduate School of Information Science and Technology
The University of Tokyo, Japan
Supervisor: Professor Kazuo MUROTA

Bachelor of Engineering *April 2004 – March 2007*
Faculty of Engineering
The University of Tokyo, Japan
Supervisor: Professor Masato TAKEICHI

Associate Degree of Engineering *April 1999 – March 2004*
Department of Electronic Control System Engineering
Numazu College of Technology, Japan
Supervisor: Professor Toshio FUNADA

WORK EXPERIENCE

Senior Software Engineer *August 2023 – Present*
Search and Recommendation Team,
Roku, London, UK

- Developed a search and recommendation system for hundreds of millions of users of the Roku video streaming service as a project owner. Deployed multiple state-of-the-arts models including sequential recommendation model for better recommendation, value-aware search/recommendation model to balance multiple objectives, and popularity-debiasing recommendation model.
- Developed a large language model (LLM)-based personalised explanation for subscription recommendation, which generates marketing taglines based on the users' interest and available contents in the subscriptions.

- Published one research paper at NeurIPS'24, which clarified the relationship between the graph neural network architecture and its expressive power using advanced graph theory.

Machine-Learning Engineer *November 2020 – August 2023*
Modern Recommendation Systems Team,
Meta, London, UK

- Developed an internal graph neural network (GNN) framework as a project owner. The framework was used in all projects in our team as well as multiple projects in partner teams. The framework trained GNNs on whole Facebook graph consists of billions of nodes and hundreds of billions of edges in a few hours; it was the most scalable GNN framework in the company. The framework was built on Python, PyTorch, Dataswarm (similar to Airflow), and Presto.
- Developed a component for the Facebook Reels (short videos) recommendation system as a project owner. The component predicted future user-creator engagements and creator-creator co-engagement, and optimised matching to help less-popular but high-quality creators. This component improved creators' productivity by 0.49% compared to the existing system
- Improved a Facebook Reels recommendation system by adding a new embedding feature representing the users; it was computed by a graph neural network. The embeddings improved the group AUC by 0.6%.
- Improved a system of detecting malicious user behaviour. Added a new embedding feature representing the users to improve the detection performance. Also, implemented a component explaining the model decision to help understanding the nature of malicious behaviour.
- Published one research paper at NeurIPS'21, which showed the validity of our GNN framework.
- Co-mentored 2 research interns and 2 AI Residency (1-year research intern).
- Performed more than 20 coding interviews.

Unit Leader *December 2016 – November 2020*
Discrete Optimization Unit,
RIKEN Center for Advanced Intelligence Project (RIKEN AIP), Japan

- Led a research team for discrete optimization and machine learning. Managed 6 full-time researchers and 5 part-time students, and accepted 9 internship students in total.
- Conducted research in various topics including combinatorial optimisation, approximation algorithms, game theory, fairness and explainability, and graph neural networks. Published more than 50 peer-reviewed publications in journals and conferences, including SODA, NeurIPS, ICML, AAAI, and IJCAI.
- Organised 3 International workshops about discrete optimisation and machine learning.
- Collaborated with several industries, such as Fujitsu (logic-based AI) and Komatsu (autonomous driving) as a technical advisor.

Part-Time Researcher (12 hours per week) *April 2017 – November 2020*
CyberAgent, inc., Japan

- Developed machine-learning algorithms for real-time bidding and location-based

advertisements.

- Published one paper at IJCAI'18 that described a real-time bidding algorithm for brand advertisement.

Visiting Associate Professor *April 2018 – November 2020*
Department of Electrical and Electronic Engineering
Tokyo University of Agriculture and Technology, Japan

- Supervised 1 Ph.D. student, and gave a lecture on discrete optimisation for 1st and 2nd-year graduate students. (3 courses)

Visiting Associate Professor *April 2018 – November 2020*
University of Electro-Communications, Japan

- Gave a lecture on combinatorial optimisation and game theory for 3rd-year undergraduate students. (15 courses)

Visiting Researcher *May 2015 – March 2019*
KIBAN(S): Large Graph Project: Theory and Algorithms
National Institute of Informatics, Japan

A visiting researcher for the JSPS Grants-in-Aid for Scientific Research, KIBAN (S) Large Graphs: Theory and Algorithms lead by Ken-ichi Kawarabayashi.

- Joined research seminar and shared the latest results.

Assistant Professor *February 2015 – March 2017*
Department of Mathematical and Systems Engineering
Shizuoka University, Japan

A faculty member (assistant professor) at a department of mathematical engineering in a local university.

- Supervised 2 undergraduate students as a laboratory head.
- Published 9 peer-reviewed papers in journals and conferences, including Mathematical Programming, ICML, AAAI, IJCAI, KDD, and ACL. The topics of the papers are diverge, but the main piller is an application of discrete optimisation methods for machine learning.
- Taught programming (C language) for first and second-year undergraduates and graph theory for third-year undergraduates.
- Organised 1 domestic workshop on operations research.

Project Researcher *October 2012 – January 2015*
JST ERATO Kawarabayashi Large Graph Project
National Institute of Informatics, Japan

A post-doctoral researcher at a research institute. The project aims at establishing graph-theoretic algorithms for machine learning, data mining, and database.

- Published 10 peer-reviewed papers in journals and conferences, including AAAI, ICDE, VLDB, and SIGMOD. These topics were discrete algorithms for large graphs.

TEACHING EXPERIENCE

Operations Research 2 *October 2019 – March 2020*
Department of Informatics *October 2018 – March 2019*
University of Electro-Communications, Japan

Introduction to Interdisciplinary Sciences *December 17 2019 (3 Classes)*
Department of Interdisciplinary Sciences *October 23 2018 (3 Classes)*
University of Tokyo, Japan

Electronic and Information Engineering: Advanced Lecture II *August 27 2019 (3 Classes)*
Department of Electrical and Electronic Engineering *February 20 2019 (3 Classes)*
Tokyo University of Agriculture and Technology, Japan

Graph Theory *October 2016 – March 2017*
Graduate School of Engineering *October 2015 – March 2016*
Shizuoka University, Japan

Program Contest *April 2016 – September 2016*
Graduate School of Engineering *April 2015 – September 2015*
Shizuoka University, Japan

Basics of Programming *October 2015 – March 2016*
Graduate School of Engineering
Shizuoka University, Japan

HONORS AND AWARDS

Best Paper Award *April 2018*
21th International Conference on Artificial Intelligence and Statistics

Best Young Presentation Award *June 2016*
Japan Society for Industrial and Applied Mathematics

Best Presentation Award *March 2010*
The Operations Research Society of Japan

Student Paper Award *September 2009*
The Operations Research Society of Japan

Dean's Award *March 2009*
Graduate School of Information Science and Technology
University of Tokyo, Japan

Tsukuba OR Student Presentation Award *March 2009*
The Operations Research Society of Japan

S@CO Best Presentation Award *June 2008*
The Operations Research Society of Japan

Dean's Award *March 2006*
Faculty of Engineering
University of Tokyo

SOCIAL ACTIVITY

Workshop Organizing Committee: Conference on Optimization *November 25–27 2019*
Fields Institute, Toronto, Canada
(co-organised with Antoine Deza, Jelena Diakonikolas, Paul Grigas, Swati Gupta, Sebastian Pokutta, Yuriy Zinchenko)

Organiser: Second Workshop on Discrete Optimization and Machine Learning *July 28–31 2019*
RIKEN AIP, Tokyo, Japan
(co-organised with Antoine Deza and Sebastian Pokutta)

Organiser: Workshop on Discrete Optimization and Machine Learning *July 23–25 2018*
RIKEN AIP, Tokyo, Japan
(co-organised with Antoine Deza and Sebastian Pokutta)

Judge: International Collegiate Programming Contest (ICPC) Japan Regional *April 2014 – March 2021*

Activity Group Member: Research Association of Mathematical Programming (RAMP), The Operations Research Society of Japan *April 2015 – Present*

Workshop Organiser: The 27th RAMP Symposium *October 15–16 2015*
Shizuoka University, Shizuoka, Japan

RESEARCH GRANTS

Theory of Optimization with Queries *April 1 2019 – March 31 2023*
KAKENHI 19K20219, PI, 4,290,000 JPY
Japan Society for the Promotion of Science

Developing a Quantitative Evaluation Framework of Game Theoretic Resource Allocation Mechanisms *April 1 2017 – March 31 2020*
KAKENHI 17H01787, Co-PI (PI: Atsushi IWASAKI), 17,290,000 JPY
Japan Society for the Promotion of Science

Tree-Metric Approximation and Approximate Computation of the Shapley Value of Minimum Cost Spanning Tree Games *April 1 2015 – March 31 2019*
KAKENHI 15K00033, Co-PI (PI: Kazutoshi ANDO), 2,990,000 JPY
Japan Society for the Promotion of Science

Discrete Convex Analysis-Based Discrete Optimization Method for Machine Learning Applications *April 1 2016 – March 31 2019*
KAKENHI 16K16011, PI, 2,470,000 JPY
Japan Society for the Promotion of Science

The Telecommunications Advancement Foundation Grant for Oversea Travel *December 2015*
Travel Grant for International Conference (December 2015), 220,000 JPY
The Telecommunications Advancement Foundation

Analysis and Development of Random Field in Deep Learning *February 13 2017 – February 17 2017*
Short-Term Joint Research Project, 500,000 JPY
Institute of Mathematics for Industry, Kyushu University
